

Machine Learning Terminologies

Across

- 4.** Name the function for finding the output from ML Model using sklearn
- 9.** This learning is based on rewards and punishment.
- 11.** Target variable.
- 13.** A supervised learning technique used for predicting continuous values.
- 14.** An Error in ML models that skews predictions.
- 16.** An unsupervised learning method that groups similar data points together.

Down

- 1.** Rule is used for building probabilistic classification model.
- 2.** Adjusting model hyperparameters.
- 3.** A mathematical representation of learning from data.
- 4.** A popular programming language used for ML and AI.
- 5.** The process of fitting a machine learning model using labeled data.
- 6.** A metric that evaluates the correctness of a classification model.
- 7.** A measurable property of data used for training ML models.
- 8.** A multidimensional array used in deep learning computations.
- 10.** A common issue where a model memorizes the training data but fails on new data.
- 12.** A function that measures the error of a model's predictions.
- 15.** The fundamental unit in a neural network.
